

Sage ERP X3

Sage ERP X3 is a full-service enterprise management software system for mid-market businesses aimed at meeting the most elaborate business processes, while remaining cost-effective, quick to implement and simple to use.

An international Solution.

With a choice of languages, currencies, enterprises, locations and legislations, Sage ERP X3 offers an efficient, multi-company solution.

Wherever you plan your company's presence, you have an ERP solution that can be easily implemented at multiple locations and in as many sales markets as a country-specific application program.

Now you can maximize your business insight and cost-effectiveness while you consolidate and exchange your information worldwide.

Easy set-up for multiple countries.

Fast, step-by-step implementation.

Finance

Sage ERP X3 provides companies with complete financial, personal, cost and budget accounting, commitments and fixed assets management. A multi-audit system, Sage ERP X3 can handle transfers and reporting of information from one country to another, and between subsidiaries and parent company. It combines decentralized and international company management, handles multiple currencies and integrates multiple legislations, accounting rules and standards.

Main features include:

- Financial accounting
- Receivables and creditor accounting
- Payment transactions (or payment management)
- Cost accounting
- Investment accounting
- Controlling
- Consolidation

Manufacturing

Sage ERP X3 supports all of the planning, scheduling and production control activities for either process or discrete manufacturing, and adapts to different manufacturing modes, including make-to-order, configure-to-order, assemble-to-order, make-to-stock and mixed-mode environments. The manufacturing module is fully integrated with the Sales, CRM, Purchasing, Inventory and Finance components.

Main features include:

- Discrete/process manufacturing
- Parts lists/composition/formula management
- Work schedule management
- MPS/MRP
- Technical data configuration
- Link to weighing scales
- Cost calculation
- Quality assurance
- Capacity planning

Sales

Sales management is part of the distribution software modules that support all sales, CRM, purchasing and inventory control functions including features to support quality control, lot control and tracking, expiration date management and variable packaging units.

Main features include:

- Open pricing
- Offers and contracts
- Order entry
- Product configuration
- Inventory commitments
- Delivery planning and shipping
- Invoicing
- Returns
- Sales commissions

Purchasing

Purchasing is part of the distribution software modules that support all sales, CRM, purchasing and inventory control functions including features to support quality control, lot control and tracking, expiration date management and variable packaging units.

Main features include:

- Material requirements
- Budget monitoring
- Supplier enquiries
- Purchase orders
- Outsourcing
- Multistage signature control
- Contracts

Inventory Management

Inventory Management is part of the distribution software modules that support all sales, CRM, purchasing and inventory control functions including features to support quality control, lot control and tracking, expiration date management and variable packaging units.

Main features include:

- Multistage warehousing and site management
- Movements and transactions
- RF data acquisition
- Quality control
- Cost calculation
- Acquisition price tracing
- Inventory control
- Procurement

CRM

Fully integrated with sales, inventory, purchasing, finance and manufacturing, the CRM module enables users to get a 360 degree view of a customer within one single system and database, from both a marketing and administration standpoint.

Main features include:

- Contact management
- Sales force automation
- Customer support
- Call centers
- Guarantee management
- Service orders
- Knowledge base
- Marketing campaigns
